GeoC S4

Iridium® Satellite Tracking and Smartphone Connectivity

GeoC S4

The GeoC S4 is an Iridium satellite personal tracking unit, which is capable of connecting to your smartphone via bluetooth and provides the WT App and Pro App connectivity to your Ops Room.

In tracking mode, the S4 sends the location reports via the Iridium Network to your Ops Room. In fallback mode, the S4 automatically takes over communication in case the smartphone loses GSM connectivity. Messaging, tracking and emergency notifications will be delivered via the Iridium satellite network.

Wherever you go, with the S4 you are always connected.

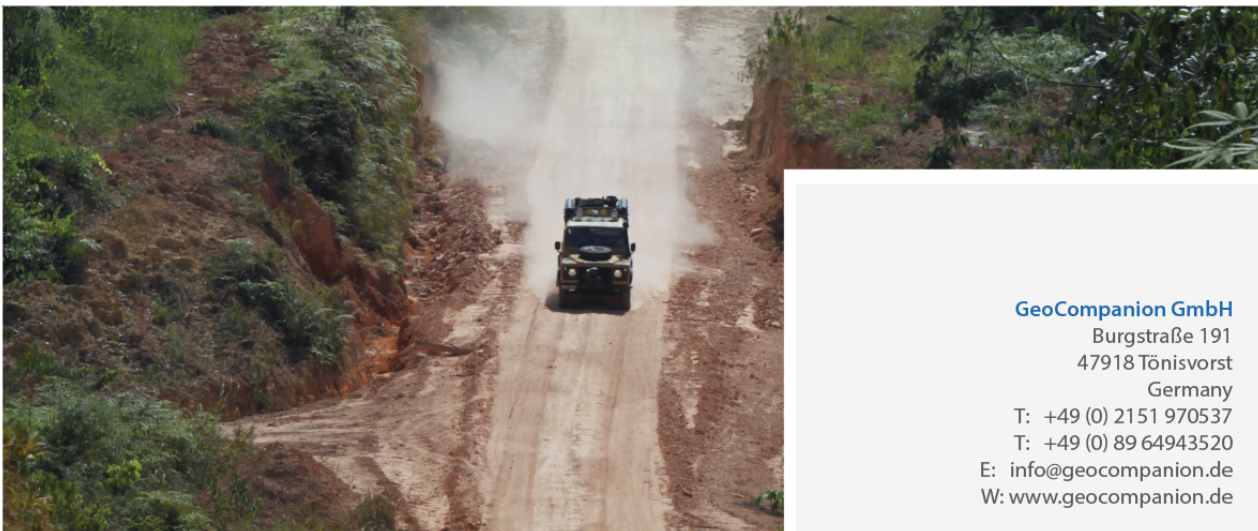

GeoCompanion offers both tracking satellite airtime as well as cost effective fallback satellite airtime.

Connected via Bluetooth

Specifications S4:

- Iridium Satellite handheld tracker
- Emergency notifications
- Basic 2-way communication
- Bluetooth
- Remote configuration
- Internal long-life battery
- Geofencing, speeding
- Truly global coverage
